Growth with operational friction.

Enterprise retail intelligence, business systems reliability and operational optimization

+9.9%	-2.75 pp	28
Q3 sales growth vs 2025	Q3 gross margin change	Orders missing ERP links

The question: Why can an accessories retailer grow sales while margin and service reliability weaken?

What the sample indicates

Sales rose from $978k to $1.08m in comparable Q3 periods, while gross margin fell from 59.7% to 56.9%. Gross profit dollars still grew.

$1.91m of stock coexists with six at-risk SKU/location pairs. About 383 days of historical COGS indicates slow overall stock circulation.

Integration failures and absent events leave $4,132.66 of ordered-value exposure. This is not established lost revenue.

Decisions and ownership

Business Systems + IT
Assign the 28-order queue; repair mapping and confirm reconciliation before closing the business exception.

Inventory + Procurement
Validate donor availability, prioritize delayed approvals and avoid indiscriminate purchasing.

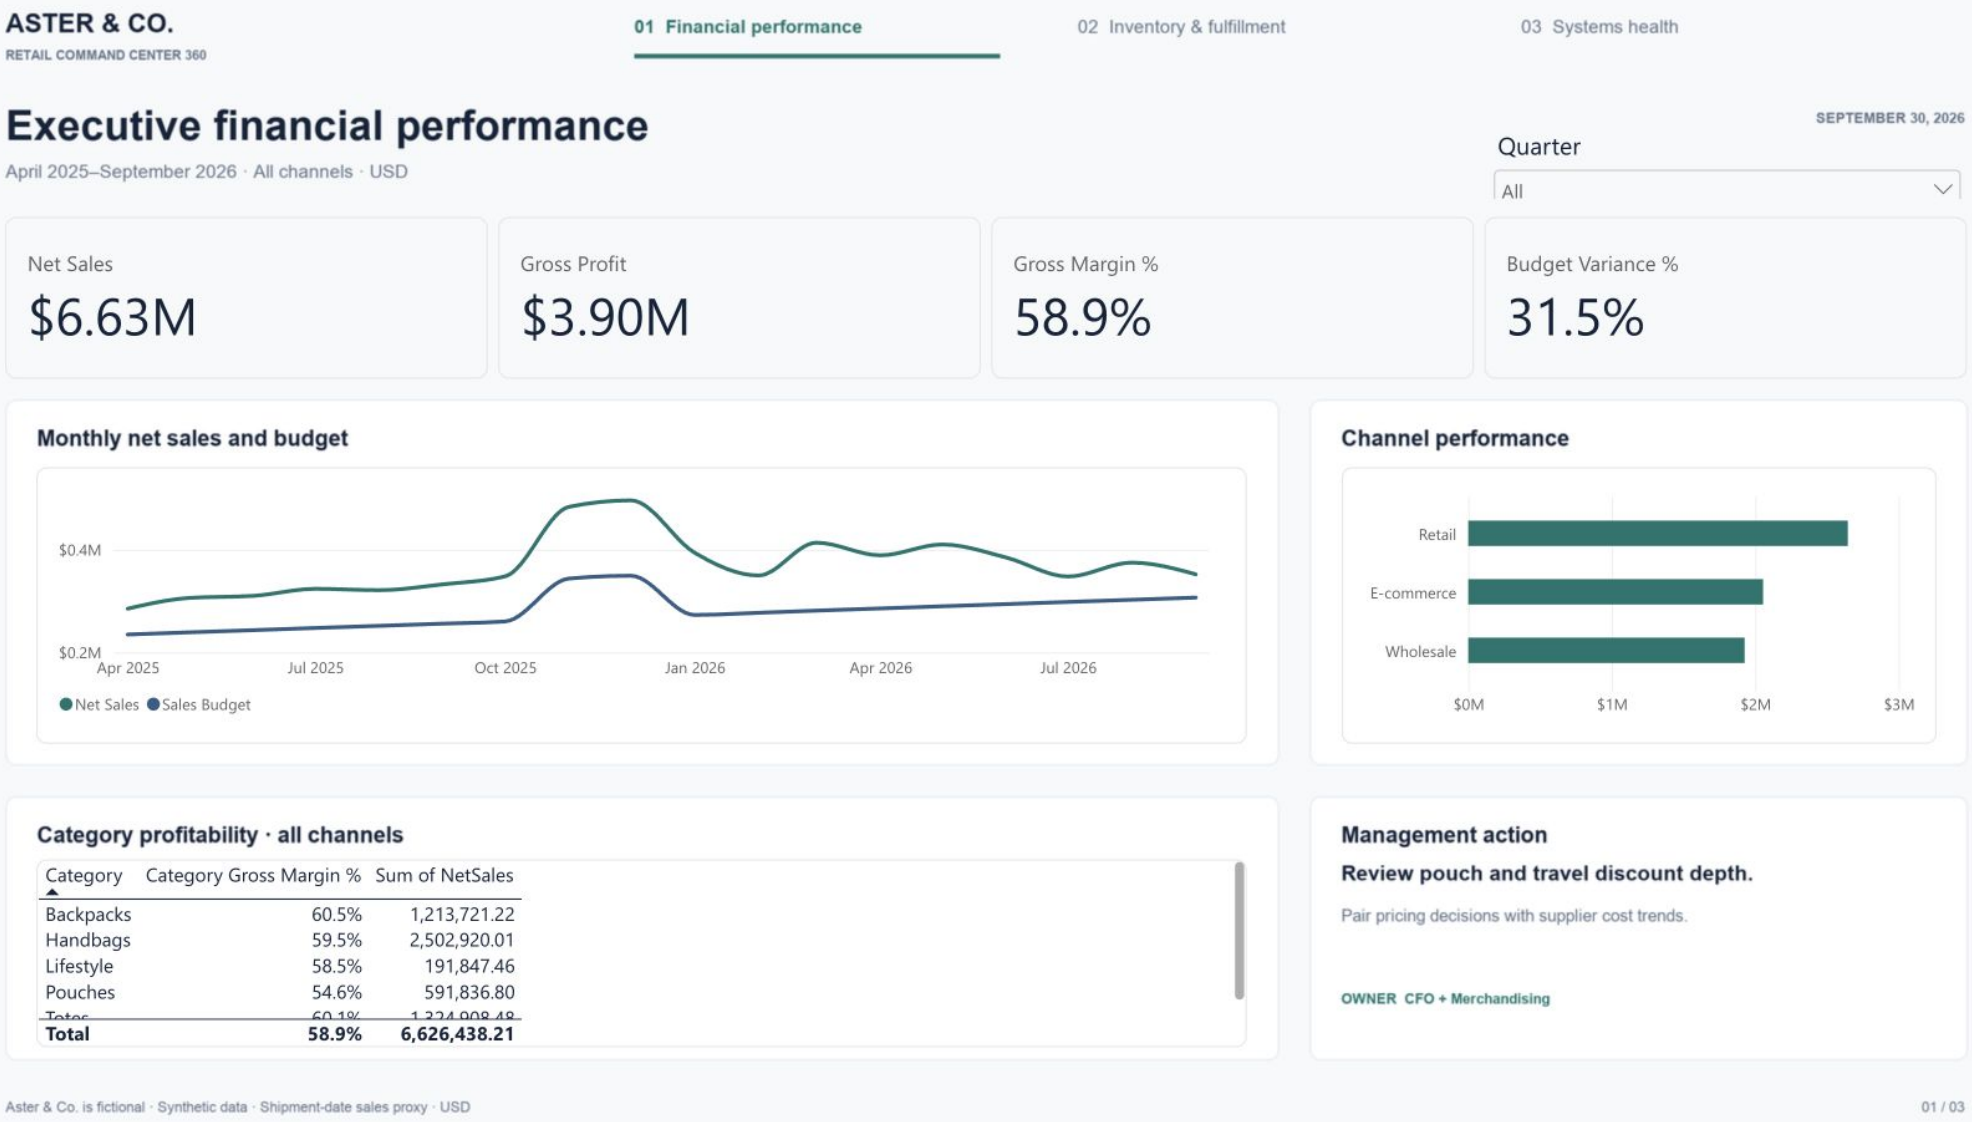

CFO + Merchandising
Review pouch/travel discounts alongside supplier cost and return trends.

Evidence: 275 dataset checks | 7 control tests | 15 SQL analyses | 20 matching raw-data hashes

Built in Power BI Service: three saved pages, 51 native DAX measures and 17 dimension relationships. This brief is an offline case summary; following pages are native browser captures.

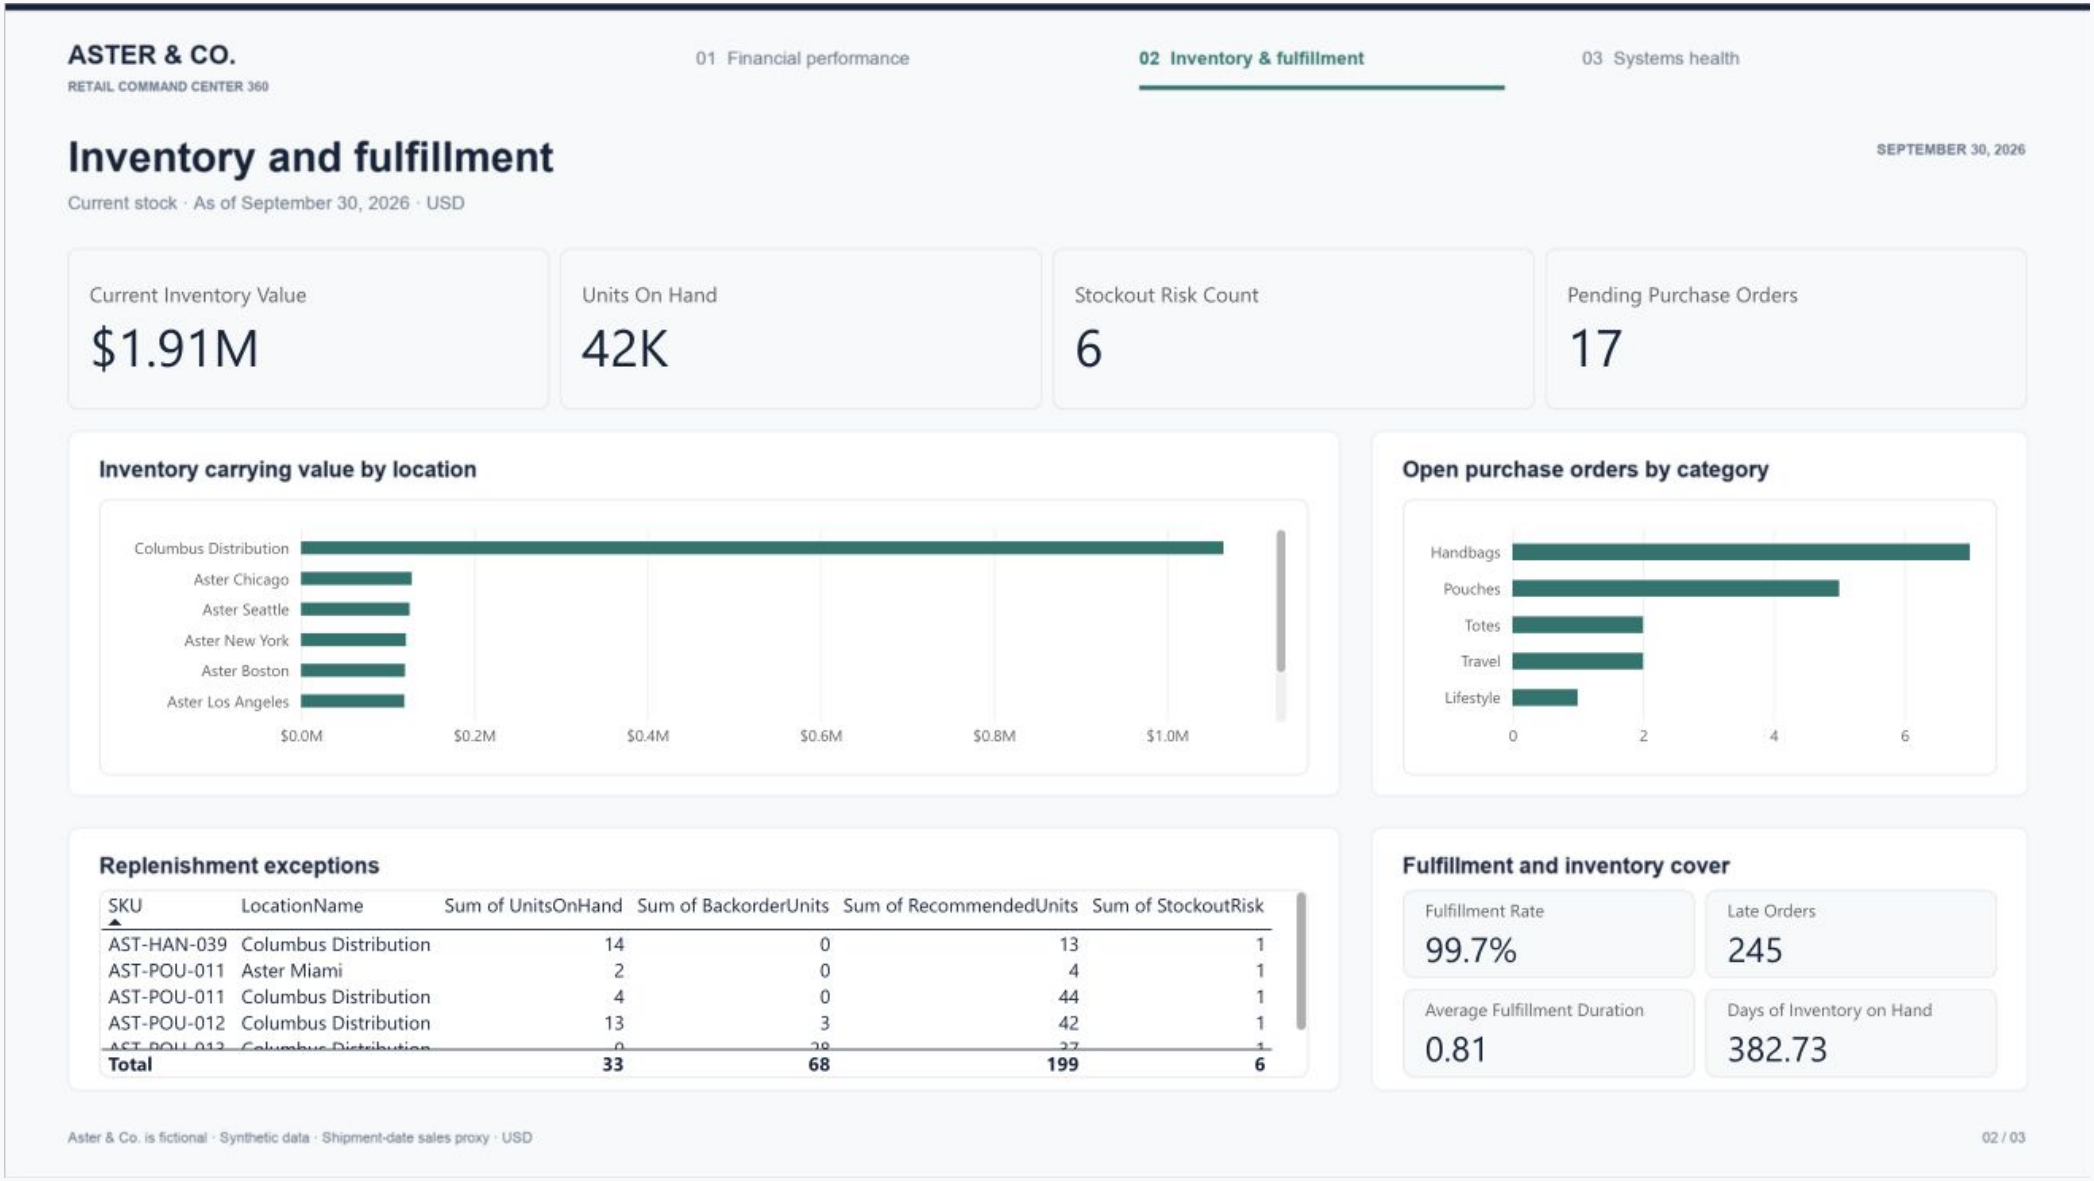

Financial performance

Native Power BI Service browser capture | All available dates unless a current cutoff measure is shown

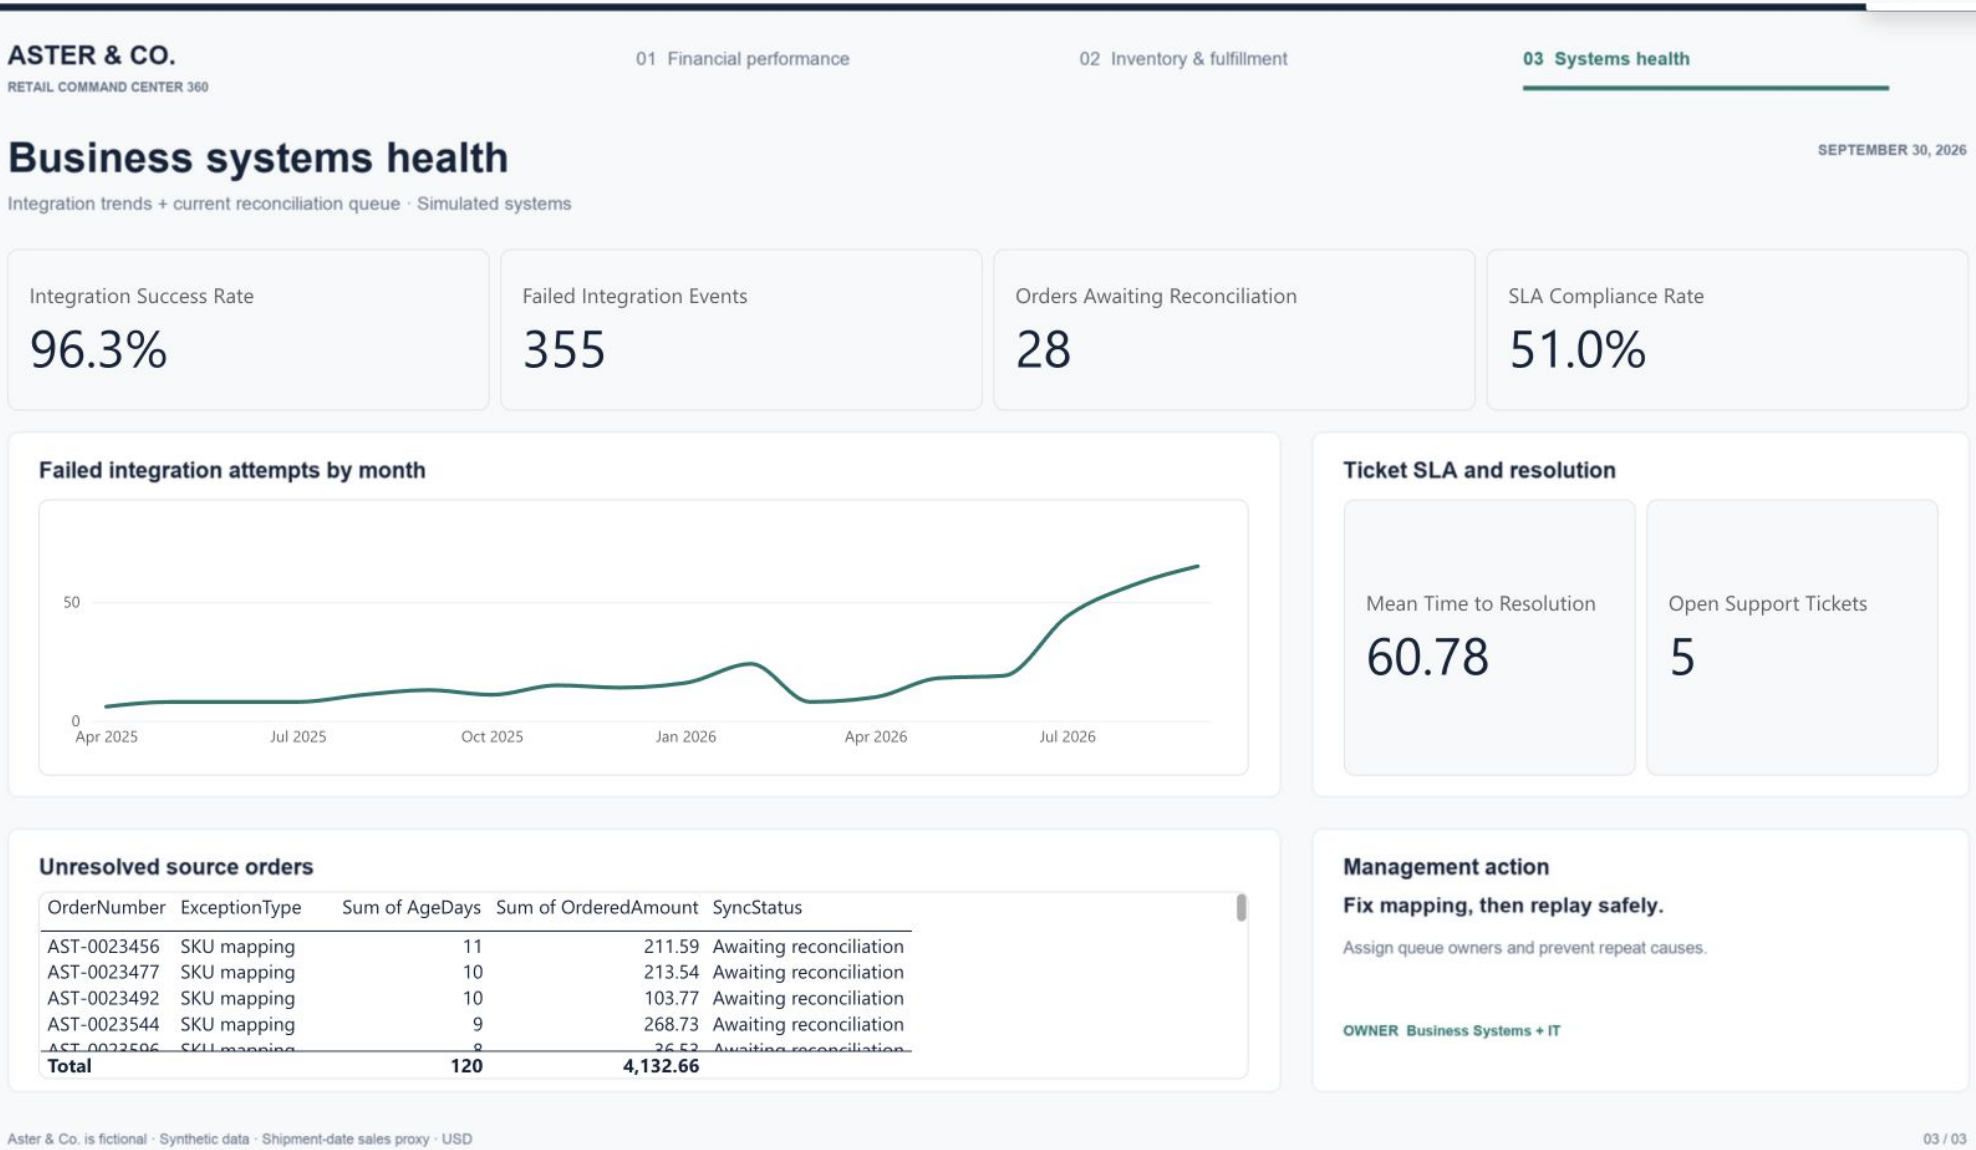

Inventory and fulfillment

Native Power BI Service browser capture | All available dates unless a current cutoff measure is shown

Business systems health

Native Power BI Service browser capture | All available dates unless a current cutoff measure is shown

A project a reviewer can inspect.

Reproducible sources, explicit definitions and evidence of native report execution

Follow the evidence

01 Read the business story

docs/executive_summary.md explains the findings, proposed actions and owners.

02 Inspect the saved report

Open the Power BI report from README.md. Account access is required; public sharing has not been enabled.

03 Trace the calculations

SQL, DAX and typed Power Query definitions are supplied. reports/kpi_controls.json is the independent numeric control.

04 Reproduce and challenge it

Run python scripts/run_all.py after installing requirements.txt. Tests inject bad references and duplicate ERP identifiers into disposable databases.

Scope and honest boundaries

All source systems and transactions are simulated. Sales is a shipment-date operational proxy, not audited accounting revenue. No production savings, real vendor integration, scheduled refresh or deployed RLS is claimed. Native order/SKU drillthrough and additional detail charts are documented extensions.

The three captured report pages are real native Power BI visuals. This PDF was assembled locally from those browser captures; it is not a retained native Power BI PDF export. Scrollable queues are provided in full as CSV. Review and understand the work before using the supplied resume bullets.
